## Projects

❖ **Newerastudy** , September 2019

It is a website in which the user or the student can get knowledge for free. In this website me and my team are going to provide tutorial of Python, Java, Machine learning(ML), data science(DS), and also some library like numpy, pandas and so on. In which the user have to give them valuable time to learn and to get everything without giving any money. The main purpose to build it is to give knowledge to those student who are not well financially and have not sufficient money for joining classes.

❖ **Salary Calculator (Minor Project)**, March 2019

This is a web application which is made in java technology and main mono of this project is salary calculation and we can check previous salary history, overall information about the employee salary can we check easily by using this application.

❖ **Smart ATM pin recovery and security (Major Project)**, February 2020

This is a web application based on python with django framework. The main mono of this project is how to reset ATM pin after blocking the ATM card. When you ATM card has been blocked after three wrong attempt and your card blocked by using this application you can reset your ATM pin easily with the help of biometric authentication.
